EXCOM 83-017  
23 December 1983

MEMORANDUM FOR: Executive Committee Members

FROM: Executive Director

SUBJECT: Executive Committee Meeting: IG Survey of DO's East Asia Division - 12 January 1984

1. The IG survey of DO's East Asia Division contained a recommendation that the Executive Director generate a study of technical and security requirements in new overseas construction or space modifications. A group chaired by the Office of Logistics, with representatives of the Offices of Security, Communications, SIGINT Operations, Technical Services, Research & Development, the DO's Information Management and Central Cover Staffs, the DDA's Safety Staff and the SSA produced the attached report.

2. I would like to discuss their report at an upcoming meeting on 12 January 1984. The Group put a good bit of thought into their study, concluding that there should be, in effect, a program manager to oversee the multiplicity of Agency people having a piece of this pie.

3. The thrust of their effort was, appropriately, the physical aspects of overseas security; given recent events, we may want to consider the study in a somewhat broader context.

4. Another IG recommendation had to do with reviewing and updating Agency policy on cohabitation. The EXCOM addressed this topic a couple of times and the DDO sent a book cable to the field on 2 December 1983. The CI Staff and the Office of Security have been working on a revision [redacted] to replace the interim book cable. I would like the Committee to hear the status of the revision and the responses to date to the book cable.
